

Lab Exercises

- 1. Given is the case of Breast Cancer in our folder *Cancer*(Cancer.csv). There are two classes of breast cancer namely recurrence-events and no-recurrence-events. Apply appropriate model to the data and find the accuracy, sensitivity and specificity of it.
- 2. Given is the Bank Marketing in the folder Bank. The following are the input and output variables respectively:

Input variables:	
# bank client data:	
1	age (numeric)
2	job: type of job (categorical: "admin.","unknown","unemployed","management","housemaid","entrepreneur","student","blue collar","selfemployed","retired","technician","services")
3	marital: marital status (categorical: "married", "divorced", "single"; note: "divorced" means divorced or widowed)
4	education (categorical: "unknown","secondary","primary","tertiary")
5	default: has credit in default? (binary: "yes","no")
6	balance: average yearly balance, in euros (numeric)
7	housing: has housing loan? (binary: "yes","no")
8	loan: has personal loan? (binary: "yes","no")
# related with the last contact of the current campaign:	
9	contact: contact communication type (categorical: "unknown","telephone","cellular")
10	day: last contact day of the month (numeric)
11	month: last contact month of year (categorical: "jan", "feb", "mar",, "nov", "dec")
12	duration: last contact duration, in seconds (numeric)
# other attributes:	
13	campaign: number of contacts performed during this campaign and for this client (numeric, includes last contact)
14	pdays: number of days that passed by after the client was last contacted from a previous campaign (numeric,
15	previous: number of contacts performed before this campaign and for this client (numeric)
16	poutcome: outcome of the previous marketing campaign (categorical: "unknown","other","failure","success")
Ou	tput variable (desired target):
17	y :has the client subscribed a term deposit? (binary: "yes","no")

Use the dataset **bank-full.csv**. Find the accuracy, sensitivity and specificity. Also draw the ROC curve stating the AUC.
